

Hollow wrist Heavy payload robot

MC400L

■ Hollow wrist structure

Avoiding interference of cables with peripheral equipment

Improved reliability of cables due to its stable behavior with wrist movement

■ High-speed motion

Top level performance in its class

■ Powerful wrist

Easy handling for large work-pieces due to the large wrist capacity

A work-piece of large moment of inertia is also available

■ Advanced applicability

Wide envelope

5 meter vertical stroke

■ Application signals are standard

2 ports for air, 40 application signals, DeviceNet cable, LAN cable
